

APERTURE CARDS

Microseal

Pocket Style Aperture Cards – DOD approved Microseal Mil-D aperture cards completely protect film from daily handling, scratches and fingerprints. The laminated, ultra thin polyester "pocket" also protects the film from deterioration by residual ammonia when interfiled with diazo copies. 35mm Tab Size Aperture cards are also available in translucent stock for use with cut sheet diazo film, allowing complete duplication of all visible information on card, as well as the microfilm image.

Tape Style Aperture Cards – Cold seal tape construction. The aperture area is surrounded by a pressure sensitive tape and covered with a protection sheet and ready for mounting a single 35mm frame of microfilm. Designed to meet military specifications: Mil-C-9877B.

Camera Cards – Microseal's camera processor aperture cards are compatible with all existing camera processors. Whether you are using 3M, Extex, Imtek, Microbox, or Schaut equipment, Microseal maintains inventory of non-printed and government formats for immediate delivery. All camera cards feature Kodak AHU film.

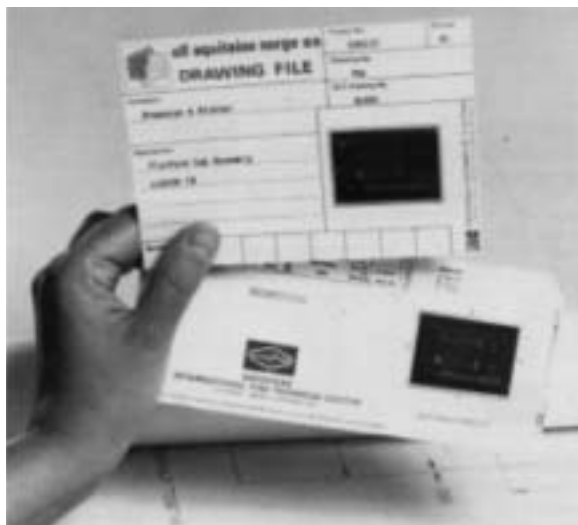

Diazo Copy Cards – Microseal Diazo Copy Cards offer top notch image quality. The film is applied to a recessed area around the aperture to maintain an even thickness across the surface of the card. This assures fast, smooth flow when cards are stacked in hoppers for duplicating and sorting. The dark blue film emulsion is high speed and high contrast for greater productivity and enhanced viewing.

3M Company

Filmsort Aperture Cards – have been the industry standard for decades. With cold seal tape cards, pressure sensitive tape securely holds the microfilm image in place. Meets all military and government specifications. Available in a number of styles. See specifications for more details.

Camera Cards – are designed specifically for use in 3M Camera Processors. Camera cards are pre-packaged in disposable daylight load cartridges. Color card stock and government formats are also available. Please specify camera model and stock number when ordering.

Duplicard Copy Cards – are for use in all types of aperture card duplicators. The 3M copy cards produce high quality duplicates on blue diazo film. Tape face is standard on all copy cards. For applications requiring third generation duplicates, the copy cards can be

ordered tape reverse. Call for more details.

Custom electroplates available – we will customize your copy cards or aperture cards with your company logo or indexing information. Call us for assistance.
