

## READER/PRINTERS - 105MM FICHE/JACKET

### Canon PC Printer 70

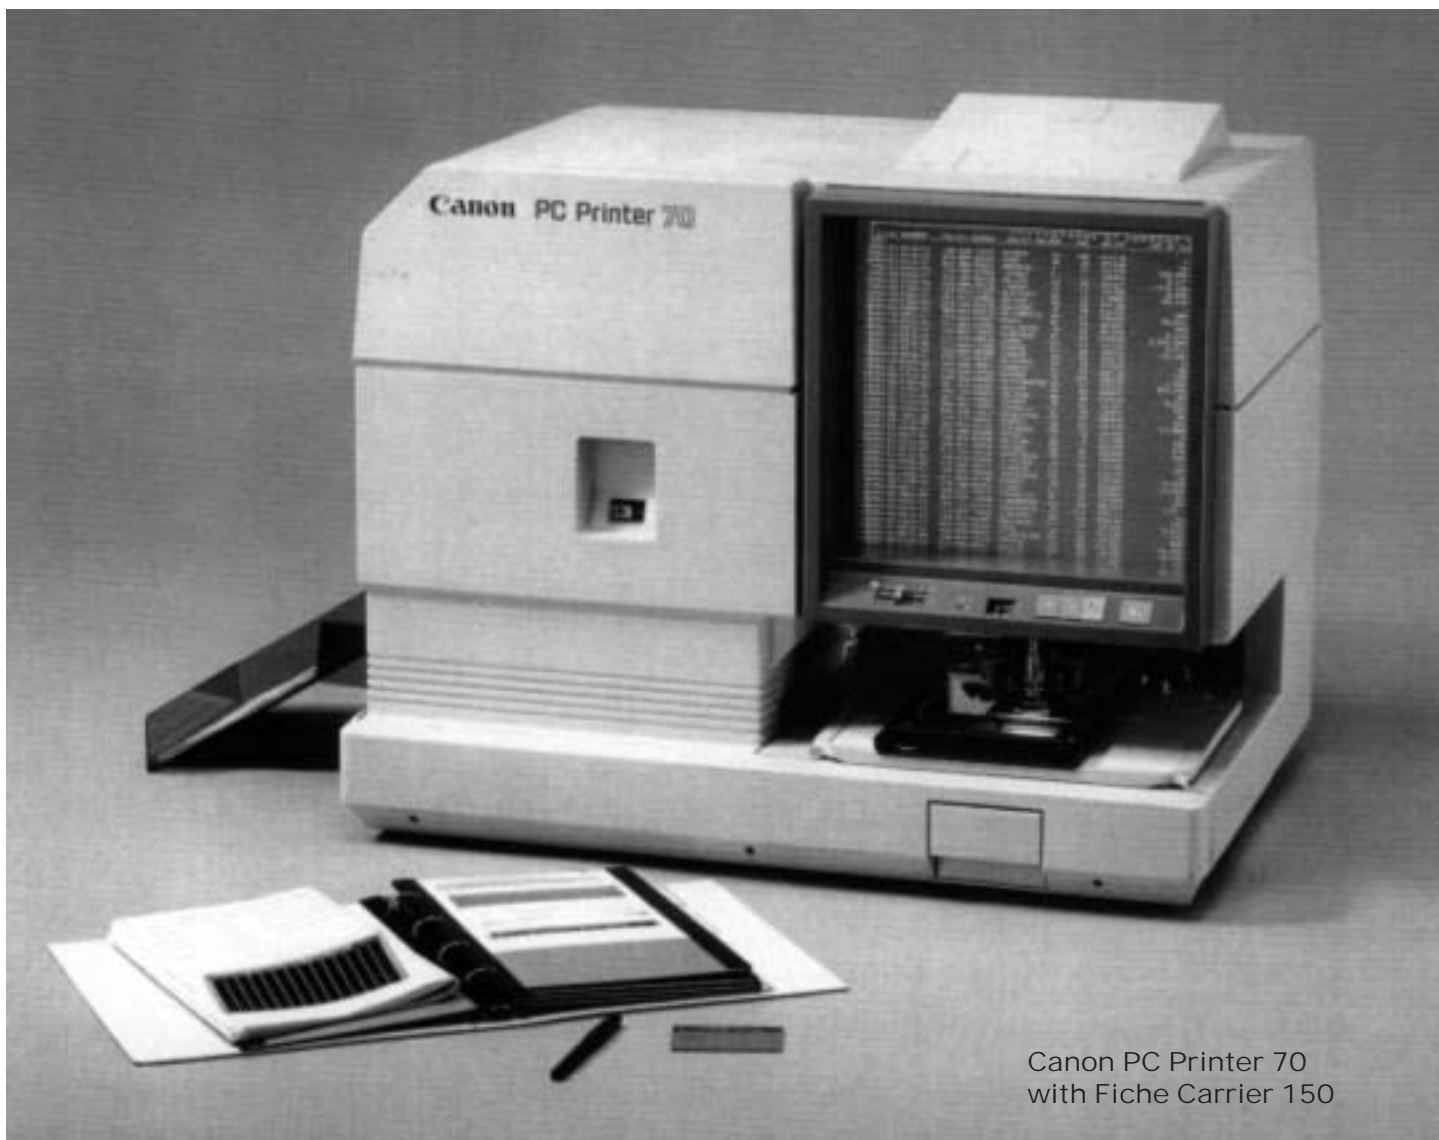

Canon PC Printer 70, a desktop PPC reader-printer, is primarily designed for decentralized use with standard COM and source document fiche currently available.

**High-Quality Performance** – PC-P70 is based upon the optical and electronic technology of the world's first personal copier, Canon PC-20. Adopting its PC cartridge system, PC-P70 produces high-quality copies on A4 or U.S. letter size plain paper at the rate of 6 prints per minute. The prints are immediately available for use. You can write or draw on them with pen or pencil to make use of them most effectively.

**Economical** – At the heart of PC-P70 is a unique operator-replaceable cartridge, containing the print drum and toner. With its capability of printing approx-

imately 3,000 copies on inexpensive plain paper from ordinary density film, total running cost is reduced to the minimum. In addition, because PC-P70 is manufactured on a new fully automated assembly line, it is offered at a very moderate price when compared with usual non-PPC reader-printers in its class.

**Minimum Maintenance by PC Cartridge System** – Since the cartridge is a sealed unit, the machine's sensitive components are fully protected, virtually eliminating needs for service. When the toner is fully consumed, just simply replace the entire cartridge. In seconds, PC-P70 is ready to print again. PC-P70 is easy to maintain – no drum to clean – no risk of toner stains on hands, clothes or equipment.
