

CAMERAS – 16MM PLANETARY

3M 6500 Planetary Camera (Minolta DR1600 Planetary Camera)

Putting documents on microfilm has just gotten easier. The 3M 6500 Planetary Camera automates nearly every microfilming function from focusing to frame size. Just place a document on the copyboard and press a button. The microprocessor-controlled camera takes care of the rest – automatically.

Even if your business produces just a few documents, the 3M 6500 is economical enough to start replacing your paper files immediately. Yet it is so fast and so simple to operate, it can easily handle even a large volume of documents.

The 6500 was designed for easy, desktop operation. The control panel is readily-accessible, clearly-positioned and so self-explanatory that even first-time operators can become automatically productive.

Automatically senses document size and selects reduction ratio

The 3M 6500 Camera automatically senses the size of documents you place on the copyboard – up to 11" x 17". Then, automatically selects the proper reduction ratio required to film them.

Automatically selects proper focus

The 3M 6500 is one of the only planetary cameras available to feature automatic focus. For crisp, clear document images.

Automatic exposure control

The 6500 Camera will automatically select the proper film exposure. For special requirements, however, you can override the automatic mode and expose the film manually.

Automatically selects proper frame size

The 3M 6500 Camera not only senses document height for automatic reduction control, but it also

3M 6500 Planetary Camera
(Minolta DR16 Camera)

senses document width for automatic frame size control. For example, up to legal size documents (8½" x 14") are filmed on one frame width of film; wider documents are automatically filmed on double frames. And the 6500 films your documents upright, so they can all be viewed and printed upright on a reader-printer.

Interchangeable camera heads

The memory of the 6500 can store "last filmed" frame locations for up to four separate camera heads. And since the camera heads are easily removable – which also makes loading and unloading film simpler – the 6500 becomes especially valuable for interdepartmental use. Up to four separate departments can use the camera without mixing document types.
